

See Real ROI with Pepperdata

Monitor and Optimize Your Big Data Stack

About Pepperdata

Pepperdata specializes in big data and application performance whether you're in the cloud or the data center, using traditional frameworks or have already moved to Kubernetes. We provide the full-stack observability and autonomous optimization companies need to get dramatic improvements out of their big data infrastructure and applications.

The product is super easy to manage, and we always had a great experience with Pepperdata support. I highly recommend this solution for anyone who would like to explore infrastructure and operations cost savings and optimization.

—Technology Director,
Fortune 500 company

In One Solution, Pepperdata Combines:

- **Full-Stack Observability:** Get actionable insights so your applications can continue meeting SLAs and you can quickly solve all of your challenging system issues.
- **Autonomous Optimization:** Reclaim up to 50% more from your existing systems to dramatically increase throughput.
- **Cost Optimization:** From IT chargeback reporting to automatically optimizing node performance, you can optimize your costs and achieve an up to 3X increase in big data price/performance.

Real Benefits for Enterprise Customers

Take a look at the benefits our customers achieve when using Pepperdata:

Save money. Increase throughput by up to 50%, and cut your hardware spend in half.

Quickly diagnose performance issues. With full-stack observability and key insights, you can cut mean time to repair by 90%.

Identify at-risk SLAs. ITOps can rely on custom alerts about events that interfere with application performance—so SLAs are never missed.

Track Spend. Easily see what factors are driving costs and how to optimize and budget accordingly with Pepperdata IT chargeback.
